Daevik Jain

daevikjain@gmail.com | +1-647-272-0094 | LinkedIn | Portfolio | GitHub

Technical Skills

Languages: Python, TypeScript, JavaScript, C++, C, Java, SQL, HTML/CSS, MATLAB
Frameworks & Libraries: React, Next.js, FastAPI, PyTorch, TensorFlow, Playwright, OpenCV, scikit-learn, Pandas
Tools & Technologies: AWS (Lambda, DynamoDB, S3), PostgreSQL, Docker, Git, Node.js, REST APIs, Agile/Jira

Experience

QA Engineer Jan 2026 – Apr 2026
Relay Financial *Toronto, ON*

- Built an AWS Lambda test account generator with DynamoDB and S3, saving **$6K+** in annual testing costs.
- Built a React/Vue.js/TypeScript platform powering bug bashes and release workflows for **80+ engineers**.
- Built GitHub Actions and Jira integrations to automate test tracking and bug reporting across workflows.
- Maintained **150+ Playwright** tests at a **96% pass rate**, catching **50+ critical bugs** pre-production.

Software Engineer in Test May 2025 – Aug 2025
RideCo On-Demand Transit *Waterloo, ON*

- Built Python/Django features for an AI transit agent handling ride booking, cancellations, and support.
- Optimized LLM API costs via model swapping and token reduction, cutting inference spend across pipelines.
- Parallelized a 50+ test pytest suite, cutting runtime by **75%** and enabling daily agent accuracy reporting.
- Audited **80+ WCAG** tests for VoiceOver and keyboard navigation, surfacing **60+ accessibility** issues.

Machine Learning Researcher Sep 2024 – Apr 2025
Biomechatronic Design Team *Waterloo, ON*

- Built a TensorFlow/Pandas pipeline achieving **91.56% accuracy** classifying 8 hand gestures from EMG data.
- Integrated wavelet transforms for EMG feature extraction, improving model robustness on noisy signals.
- Engineered a Matplotlib + Tkinter tool for real-time EMG signal graphing, debugging, and inspection.

Projects

Avesia – Winner at NexHacks | ***React, FastAPI, Python, MongoDB, OpenCV, Tailwind***

- Built a no-code AI platform with drag-and-drop workflow for non-technical users to build surveillance pipelines.
- Architected a full-stack React, FastAPI, MongoDB app with a Gemini-powered agent and **10+** REST API endpoints.
- Implemented OpenCV motion-detection algorithm to throttle API usage and optimize E2E pipeline performance.

Compass – Winner at QHacks | ***FastAPI, pgvector, Supabase, PostgreSQL, React, scikit-learn***

- Built an AI-powered civic dashboard to query complaints data and generate data-backed analytical reports.
- Designed a RAG pipeline with FastAPI, Supabase, and pgvector, integrating a Gemini agent for trend analysis.
- Implemented UMAP to project 768-dimensional vector embeddings into an interactive 3D cluster visualization.

Blurr – Semifinalist at HackTheNorth | ***FastAPI, OpenCV, WebRTC, React, Python, TypeScript***

- Created a real-time computer vision privacy shield that detects and blurs sensitive information in live video streams.
- Built a low-latency YOLOv8, OpenCV, and WebRTC pipeline achieving **sub-100ms** in-memory video redaction.

Solari – HackThe6ix | ***Python, C, Embedded Systems, QNX, TwelveLabs***

- Developed an AI assistive wearable with real-time audio and haptic feedback for the visually impaired.
- Built a multimodal pipeline with TwelveLabs and Gemini APIs for real-time scene analysis and narration.
- Architected a dual-Raspberry-Pi system isolating QNX for sensor processing and Linux for AI inference.

AI Platformer | ***PyTorch, C++, SFML***

- Built a 2D platformer with a native PyTorch C++ reinforcement learning agent to autonomously beat parkour levels.
- Implemented a dual-head policy network with sigmoid jump and softmax movement outputs.
- Designed a reward-normalized policy gradient loop with Xavier initialization and a sliding experience replay buffer.

Education

University of Waterloo Sep. 2024 – Present
BASc in Biomedical Eng, Option in Software Eng, President Scholarship of Distinction, 3.9 GPA *Waterloo, ON*
